

# Boost Cell Signal in Remote Cottages, Lake Cabins & Chalets

Stay connected further and boost all mobile devices with SureCall's award-winning booster kits that were built for performance at the edge of the network. SureCall's cottage solutions are 5G compatible and increase voice, text and data signals for all Canadian carriers, including Bell, Rogers, SaskTel & Telus. IC-approved boosters are designed, assembled and tested in the USA.

## Flare 3.0

PCMAG EDITORS CHOICE  
BEST HOME BOOSTER

**SMALL COTTAGE** Flare's easy-to-install base unit boosts signal in 1 - 2 rooms of a small cottage. The highest cellular uplink power on the market helps users connect at the very edge of the network. Kit includes outdoor yagi antenna and 50 ft of RG-11 cable for 67% more power than RG-6 cable. Part number: SC-Flare3CA

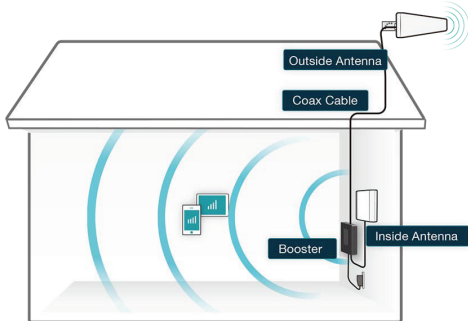

## Fusion Professional

RESIDENTIAL SYSTEMS  
PICKS AWARD WINNER

**LARGE COTTAGE** Fusion Professional is the premier cell phone signal booster for large residences in the weakest signal environments. All booster kits come with SureCall's industry-leading customer satisfaction suite which includes 24/7 lifetime US-based tech support and 3-year warranty. Part number: SC-FusionPro

# How do cottage boosters work?

Cottage boosters amplify the available outside cellular signal and distribute it inside the building. To boost signal indoors, some signal must exist outside. The directional high-gain yagi antenna captures this signal outside and the SureCall booster amplifies and re-broadcasts inside to all mobile devices. The booster then amplifies outgoing signal back to the cell tower.

## WILL A COTTAGE BOOSTER WORK AT MY LOCATION?

As a best practice, if you can make and hold a phone call just outside the cottage, SureCall will work at your location. If your cottage is surrounded by trees, it is recommended that you wait until the leaves are on the trees and then confirm the steps below before purchase::

- 1) Can you reliably make a mobile voice call within 20 ft of your cabin?  
If YES, the signal booster will work. If NO:
- 2) Can you reliably send & receive texts within 20 ft of your cabin?  
If YES, the booster will work with limited coverage. If NO:
- 3) Can you reliably make & receive texts when standing on the roof of your cabin?  
If YES, coverage will be very limited.  
If NO: Unfortunately, a retail cellular booster solution is not recommended.

## OPTIMIZING FOR BEST RESULTS

Finding an outdoor location with consistent signal that the antenna can capture is important and will improve performance. For max results, mount the outdoor antenna at least 30 total feet from the booster and as high as possible outside.

**Aiming the Yagi Antenna:** Ask your sales rep about SureCall's Tower Tool that helps locate nearby towers. Or, grab a friend and have them stand near the base unit with a phone. Slowly rotate the antenna, stopping every 45 degrees or so. Mount the antenna aimed in the direction that showed the best signal on the phone.
